## **I. OBJECTIVE OF THE PROJECT**

When our predecessors million year ago set fire in the cave they could not think about manned trip to Moon. Now we do not think about trip to other galaxy. And just because science tells us that now it is not possible.

But it will be. And this project's goal is to make it happen faster. No one knows if we need 100, 1000 or more years. But we can start to work on it now.

There are many scientist and businesses that work on travels to Moon, Mars and even to nearby solar systems. These travels are within our reach. But for intergalactic travels we need breakthrough and not only improved propulsion, faster ships or more time.

Bad news is that reasonable person will not invest into searching breakthrough which is practically impossible. Good news for you as an investor is that I do not ask you for investing in pure fiction project.

I ask you to invest in profitable businesses and gain profits. Another part of profits will go to foundation that Docon will create in the future.

So objective of this project is to create foundation that will support research for means of intergalactic travels. And finally find some way to visit some galaxy millions light years away (nearest spiral galaxy to our Milky Way is 2.5 million light-years away from Earth).

With all technologies that are available now we can say that we just stick our heads out of our cave. We should not let us convince that we will never pass the mountains we see far away. And sure do not believe that only space professionals and certificated out of the cave watchers have a right to plan outside cave trips.

## II. BUSINESS, PROFITS + 1% LIFETIME SHARE

As asking for donations is not planned, profitable business has to be run to support foundation.

If you actively searching for business opportunities I would like you to invite you to invest in business ideas that fits your needs and experience.

In contrary to typical start-ups that are looking for investors Docon will present you a few projects tailored to your profile. You will chose the best. And all details, plans, profits are negotiable.

Then, when Docon creates further other businesses you will gain again – that is 1% lifetime share concept.

5% of all profits made by all concerned businesses will be passed to initial investors. These 5% will be divided between 5 investors. Four 1% shares will belong to investors that invest 50000 GBP capital each and the fifth 1% share goes to so called "HR investor" which is explained in last paragraph.

**(Investors with any capital are welcomed 50K threshold concerns only these "1%" investors)**

To become investor and secure your 1% overall profit you need to invest about 50K GBP. And reasons why this crazy idea is not as risky as it may appear at first glance below:

- *at the beginning I will present you 5-10 business ideas that you can invest,*
- *your first investment do not have be higher than 5000GBP,*
- *when first, small business brings profits you are presented with another 5-10 business ideas to choose from, and this it the moment when you decide if you want to go with your 50K capital.*

Profits that you make from your investments will be negotiated individually. So for example it could looks as below:

- 1st investment - you take 80% of profit after taxation
- 2nd investment - you take 75% of profit after taxation

So if the 2 businesses will be profitable by next dozens of years you will get your profits each year. Plus 1% profit of all Docon project businesses operations in future.

But there is one catch. If you as an investor would like to participate in decisions within projects you invested in - you will secure your future 1% only if business bring profits.

If you pass decisions on me and will not interfere you will secure your 1% future profit even if this particular business managed by me in which your invested your money is not profitable.

	Business brings profits	Business does not bring profits
You participate in decisions	1% lifetime share	1% lifetime share NOT GRANTED
You do not participate in decisions	1% lifetime share	1% lifetime share

So shortly - risks as in usual investment projects but much higher profits expected in future.

If you are interested I will send you NDA. Then we both sign and after you send me your requirements and suggestions (if any) I will start to present business ideas and we can discuss them, try to find best investment solution for you, develop project and run it successfully.

### III. WHY TO INVEST IN DOCON?

Why are my advantages? Why I will be effective project manager of businesses that you will invest in?

My position is unique at the crossroads of several streams of information and experiences.

From 8 years I work as independent consultant delivering my services to various companies worldwide (Europe, Asia, US). I do not work for government or governmental subsidized companies but mainly for these businesses that are exposed to competition. I worked for largest furniture manufacturer in Europe, for world leading IT company, for world's largest DIY retailer and dozens of SME's.

As my main activity is collecting, analyzing and reporting business information I'm in everyday touch with various companies, branches, data. So shortly - I'm closer to real economy and everyday business than Harvard Business Review.

I studied economics and propaganda (public relations) and have a knowledge in field of social psychology, sociobiology, social physics. So I know how businesses works from social side.

From the other hand I visited many modern factories and traditional workshops so I understand how production works. I worked as electrician on construction sites so I'm used to solving problems quickly and in effective way. I also worked as salesman in brick and mortar retail and online sales. And successfully run some very small businesses with my pocket money.

As for management side - I have experience with managing people autocratic style ( I'm military reserve sergeant ) and persuasive way ( I managed freelancers teams). And can switch easily.

Thanks to that unique set of experiences and knowledge you can be sure that your investment is in good hands of person that understand well business environment, logic of company and human behavior.

Besides of final objective of the project - supporting research for means of intergalactic travels, please take note that you will not invest in crazy dreams but in business ideas deeply rooted in reality. And the dream which I invite you to participate will not influence performance of businesses you will investing in.

If you are interested you will find more details about my recent activities in my CV.

#### **IV. FOUNDATION**

Why we need business supported foundation to make that project works?

Governments, which still are main investors in space technologies and sponsor of scientific research, depend on public opinion. Some day voters can demand to stop spending money on space research. Especially when it stops to bring weapon technology advantage or hopes for exploiting new resources will diminish drastically. Look for example on history of SETI project.

From the other hand businesses tends to invest in projects that can bring returns in period maximum a few dozens of years and are not interested to donate money for pursuit of dreams. That is why we need some entity independent from state and third party businesses.

#### **Foundation will search for and support breakthrough. How exactly?**

Taking into consideration time that we need to develop businesses and earn reasonable funds, we do not have to decide now.

Tasks of the foundations will be:

- *searching for ideas and people that works on interesting things, evaluate and support them,*
- *education,*
- *initiation of research,*
- *etc.*

Personally I think that after years of science pioneers working individually ( like Newton) then scientific teams (last century) in the future we need creative artificial intelligence and robots teams to create ideas, check how they working and effectively solve new more and more complex problems. So maybe at beginning we will support artificial intelligence projects.

Or maybe we will help to search for other civilizations in space to ask them to pass us solutions or help to develop intergalactic travel devices. But maybe we are the first civilization in Universe (improbable but someone had to be first).

So it would be also good direction if we will search for lone wolf geniuses and help them with their work. And even if their inventions would be not turning points but just useful progress it is still worth to help them. And if their innovations would be commercialized it will help to develop Docon operations.

But shortly - before we start to search for solutions we have to secure funds first

## V. NAME OF THE PROJECT

At the beginning I was thinking to title this project with name of the most distant galaxy ever seen ( galaxy z8\_GND\_5296 - 13.1 gigalight-years from Earth) but as this name was very unfamiliar finally project was called Docon.

Docon Draconis (other names: Mrk 0205, PGC 039975) is another galaxy/quasar and only one billion light-years from Earth. And Docon (dokòn, latinized docon) is the present participle of “dokeò” to seem, expressing the fact that this galaxy seems different from what it is in reality.

Source: Catalogue of Named Galaxies (

And idiom "appearances can be deceiving" fits very well this project witch may appear a bit crazy at first glance.

Of course name of the project does not imply which galaxy we would like to visit first. It is just symbolic name.

## VI. THE HR INVESTOR

As for 5th investor - HR investor, case is different. HR investor can secure his/her 1% profit of all Docon businesses operations in future by simply hiring me for a period up to 5 year which I suppose I need to collect capital to start to run full scale business. Professional attitude guaranteed. Docon idea will not influence my performance. Other people has some engaging hobbies too. And if I leave earlier you are still a winner with all my services delivered and your 1% lifetime share.

As for now I work as independent consultant for various clients which it takes a lot of time to negotiate, switch between different tasks, preparing offers, etc. That is why I search for one&only employer which can hire me for 35-40 hours a week. So it is no risk involved for HR investor. Companies hires and pay people anyhow. But there is a catch here - I'm looking for job witch contains at least a bit of problem solving and is paid not less than my last full time job (could be 50% if job is really interesting and company at stage of development ).

I'm best in searching for, interpreting and analyzing information. I can deal also with Big Data or programming, but need some time to learn given language or tools. Can do market analysis, export-import, sourcing, product development, marketing, SEO, innovation, establishing system based on psychology, online investigations, etc. Could be independent specialist or manager job. Preferably constantly changing tasks of different types - in areas that company would like to try new solutions to gain more efficiency. Preferably home-based but any place is to discuss. If you are interested I will send you my CV. Please contact me under e-mail: [docon@infotimes.pl](mailto:docon@infotimes.pl)

## VII. CONTACT, NEWSLETTER, CROWDFUNDING

KRZYSZTOF KURPIECKI

WEBSITE: [docon.infotimes.pl](http://docon.infotimes.pl)

PHONE: 0048 504 637 052

E-MAIL: [docon@infotimes.pl](mailto:docon@infotimes.pl)

Feel free to contact me:

- *if you want to ask a question, make a suggestion,*
- *support the project any way,*
- *recommend an investor,*
- *invest,*
- *etc.*

Please subscribe the **NEWSLETTER** and you will be informed of any progress of the project, investment options (crowd-funding could be available later), cooperation opportunities, etc. To subscribe just send me an e-mail with „SUBSCRIBE” in title. („unsubscribe” to unsubscribe).

And the story behind this project? Not very exciting but here you are:
